DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of the species combination of nitrate salt and thin film nanocrystalline silicon in the reply filed on 26 October 2005 is acknowledged. The traversal is on the ground(s) that there is no burden on Examiner to require a species election among the oxidants. This is not found persuasive because the different species are distinct molecular entities that consequently have patentably distinct characteristics. Hence, to search more than one patentably distinct molecular entity would be a burden on the Examiner.

The requirement is still deemed proper and is therefore made FINAL. Amended claims 4-7, 10, and 12 are withdrawn because they are drawn to non-elected species.

Because to the amended claim language in the amendment received 26 October 2005 the restriction requirement for inventions is withdrawn because it appears the amended claim language and cancellation of claims has obviated the need for the requirement. However, the amended claim language has necessitated need for a requirement for election of species which is stated below.

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I: method for detecting a target analyte

Species II: method to initiate an explosive

Species III: propulsion system for a MEMS device

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-3, 8,9, and 11 appear generic to the instant election of species requirement.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
